
SIRAJ RAVAL'S DEEP LEARNING FOUNDATION

NANODEGREE FOUNDATION PROGRAM

Student Handbook

Artificial Intelligence is transforming our world in dramatic and beneficial ways, and Deep Learning is powering the progress. Together with Siraj Raval, Udacity provides a dynamic introduction to this amazing field, using weekly videos, exclusive projects, and expert feedback and review to teach you the foundations of this future-shaping technology. To prepare you for this program, we've compiled everything you need to know in this handbook.

MEET THE TEAM

Meet the Team

MEET SIRAJ

Hello, I'm Siraj! I'm a Data Scientist, bestselling author, and YouTube star. I make videos that teach people how to use machine learning to create game bots, chatbots, self driving cars, programs that create art & music, stock prediction models, and much more. I'm proud to be an exclusive Udacity partner, and excited to be your host for this amazing program.

YOUR TEAM

Instructors - Siraj Raval, Mat Leonard

Services Lead - Adarsh Nair

Leads - Orit Avital, Mike Wales, Dhruv Parthasarathay

Community - Lisbeth Ortega

Mentors - Dozens you'll meet along the way!

YOUR RESOURCES

Forums

In this Nanodegree Foundation program, you'll have access to an exclusive forum. In this forum you'll not only be able to talk to other passionate students, but also receive help from our expert Coaches and dedicated staff.

We monitor and respond to an ongoing stream of detailed feedback from student forum participants, and this has allowed us the opportunity to constantly refine, enhance, and upgrade the model. Thanks to your feedback in the forums, we can ensure the program improves over time.

Find Forums in the Classroom

1. Open the menu

2. Click on the forums icon

Slack

Udacity students of this program can interact with each other live via Slack. Connect directly with students who are online the same time as you: ask questions, exchange ideas, and get to know your fellow classmates.

Join the [Slack Team for Deep Learning Nanodegree Foundation students](#). Once you're in, click on Channels, and introduce yourself on the **#introductions** channel!

Support

Reach out anytime. Udacity has dedicated support for the Deep Learning Nanodegree Foundation program.

Simply reach out on the forums or at **deeplearning-support@udacity.com**.

WHAT TO EXPECT

See our full **Deep Learning Nanodegree Foundation FAQ** and **general Udacity FAQ**.

System Requirements

The minimum system requirement is a 64-bit operating system with ~8 GB of RAM. You will also need to install [Python 3](#) and [Jupyter Notebooks](#).

Later in the program, we will provide you with the AWS instance for more intensive needs.

Class Timeline Pacing

This is a unique, 17 week-long program that will bring students a new lesson on a weekly basis. Students are expected to keep pace with their peers throughout the duration of the program and will complete 5 Deep Learning projects by their respective project deadlines. The entire program takes 4 months to complete.

Weekly Pace

Every Friday at 5pm (Pacific), Siraj will release his initial video covering a concept.

Every Wednesday at 10am (Pacific), Siraj will conduct a one hour live session on this concept.

Every Wednesday, we will release more in-depth content related to this concept.

Class Timeline Curriculum

WEEK 1

Types of Machine Learning and when to use Machine Learning

Live session: Linear regression from scratch

WEEK 2

Neural Network Architecture + Types

Live session: Numerical classification from scratch

WEEK 3

Cloud computing + sentiment analysis

Live session: Sentiment Analysis from scratch + cloud computing detailed instructions

WEEK 4

Math Notation + recommender systems

Live session: Various math examples + recommender system from scratch

WEEK 5

Data preparation (cleaning, regularization, dimensionality reduction)

Live session: Data prep from scratch

WEEK 6

Drone image tracking

Live session: Image classification from scratch

WEEK 7

Stock prediction

Live session: Stock prediction from scratch

WEEK 8

Art generation

Live session: Artistic Style transfer from scratch

WEEK 9

Music generation (LSTMs applied to Audio)

Live session: Generating music from scratch

WEEK 10

Poetry generation (LSTMs applied to NLP)

Live session: Text generation from scratch

WEEK 11

Language translation (sequence to sequence)

Live session: Language translation from scratch

WEEK 12

Chatbot QA System with voice

Live session: Chatbot from scratch

WEEK 13

Game bot 2D (reinforcement learning via Monte-Carlo tree search)

Live session: Game bot from scratch

WEEK 14

Image compression

Live session: Autoencoder from scratch

WEEK 15

Data visualization

Live session: Data visualization from scratch

WEEK 16

Image generation

Live session: Generative adversarial network from scratch

WEEK 17

One-shot learning (Probabilistic Programming)

Live session: One shot learning from scratch

Class Timeline Deadlines

Our ultimate goal is to ensure that every single student accepted into the program successfully graduates. Our coaches and mentors will work directly with any students who are struggling with the timeline requirements.

Deadline for graduation: In order to graduate the program, you must complete, submit and meet expectations for all required projects within 6 months of your start date. Meeting expectations means a Udacity Reviewer has marked your project as “Meets Specifications.”

Individual project deadlines: While individual project deadlines are suggested, they are critical to your success and to reaching graduation. We strongly urge students to keep good standing with regards to individual project deadlines.

Class Timeline **Missing Deadlines**

If you do not complete all projects within 6 months of the start of the program, you do not graduate and earn your credential, and you are no longer eligible to receive automatic admission into either the Artificial Intelligence or the Self-Driving Car Nanodegree programs. You will be removed from the program and will need to re-enroll—your progress does not carry over, and you will need to start from the beginning again.

If you miss individual project deadlines, you jeopardize your ability to meet the 6-month requirement, graduate, receive your credential and your guaranteed admission into either the Artificial Intelligence or the Self-Driving Car Nanodegree program. Maintaining good standing with regards to project deadlines is critical to your success. If you're not keeping pace with your fellow students, forums and Slack channels can lose their value. Your peer network can break down, because you're no longer working on the same content as the rest of your class. Plus, you miss out on exclusive content rewards for on-time submissions!

Class Timeline **Time Dedication**

3 HOURS / WEEK

Between instructional content, projects, and other course-related activity, we estimate that investing 3 hours/week will enable you to proceed through the program at a successful pace.

Class Timeline **Schedule**

Find the dates for each of your project deadlines next to the respective lesson [in your classroom](#).

- **Project 1** Your First Neural Network
- **Project 2** Object Recognition
- **Project 3** Generate TV Scripts
- **Project 4** Make a Translation Chatbot
- **Project 5** Generate Faces

Community

Finding support in fellow students can make all the difference in your educational experience. Take advantage of Slack and the Udacity forums. These are spaces to exchange ideas, questions and progress with your classmates.

Community (cont.)

LIVE SESSIONS

Every Wednesday, Siraj will hold a 1 hour live session with students. This is an opportunity to ask questions on class content, but also an opportunity to see fellow students' questions and interact.

COMMUNITY EVENTS

Community events will give you the opportunity to meet classmates both on and offline (dependent on location), team-build and take part in extracurricular opportunities.

What to Expect After Graduation

NANODEGREE CREDENTIAL

Students who graduate the program receive a Udacity credential in Deep Learning Foundation.

CONTINUED LEARNING

Your deep learning practice doesn't end with graduation. In fact, it's just beginning — graduation from this program will guarantee entrance to our [Artificial Intelligence](#) or [Self-Driving Car Nanodegree programs](#). Graduates will also receive \$100 off of the first term of either of the above Nanodegrees.

Both of these world-changing programs have a competitive pool of applicants vying for admission, as well as industry names like Mercedes-Benz and IBM Watson seeking to hire future engineers like you. You'll be equipped with additional 1:1 mentorship and career support to get you on your path to becoming an engineer in the field.

Read more on the [Artificial Intelligence](#) and [Self-Driving Car Nanodegree](#) curriculums.

Policy

COST

This Nanodegree Foundation program costs \$399.

REFUND

Students have a 7-day window from the day they receive access to the program, the first day of their class, to un-enroll and request a refund. To request a refund, email **deeplearning-support@udacity.com**.

Recommended Books

[Grokking Deep Learning](#) by Andrew Trask. Use our exclusive discount code traskud17 for 40% off. This provides a very gentle introduction to Deep Learning and covers the intuition more than the theory.

[Neural Networks And Deep Learning](#) by Michael Nielsen. This book is more rigorous than Grokking Deep Learning and includes a lot of fun, interactive visualizations to play with.

[The Deep Learning Book](#) from Ian Goodfellow, Yoshua Bengio, and Aaron Courville. This online book has lot of material and is the most rigorous of the three books suggested.
